

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. Cancelled

2. (Currently amended) A system, comprising:

a television remote which has a first communication part, operating to communicate wirelessly to a television that is controlled by said television remote, said television remote having first buttons controlling at least a plurality of functions on [[a] the controlled television, and wherein the controlled television which is separate from said television remote, said television remote mounted in a housing, which housing is totally separate from the television being communicated with and controlled by the remote, and said television remote also having a command which accesses information from a hyperlink supplemental signal that represents a link to additional information, which link can be selected by actuation of said remote to find said additional information from a database that is separate from said remote, and where said additional information provides additional information about ~~is associated with~~ a television program which represents program content that has been received over a program content receiving channel and ~~that~~ is being currently displayed on a display of the television,

wherein said television remote also includes a second communication part, that operates to communicate wirelessly ~~communicates~~ with a separate computer, to send said additional information to said second computer indicative of said link having been selected and to cause display of said information from said hyperlink supplemental

Appl. No. : 09/669,959  
Filed : September 26, 2000

signal on a display of the separate computer, and where said display of said separate computer is totally separate from the display of the television.

3. (Currently Amended) A system as in claim 2, wherein said television remote transmits a command that causes said information to be displayed only at a next startup of a process on said separate computer, and not to be immediately displayed on said separate computer and not to be displayed until said next startup.

4. (Currently Amended) A system as in claim 2, wherein said information is added to a list of internet favorites on said separate computer, where said list of internet favorites represents internet website addresses obtained from said hyperlink.

5. Cancelled

6. (Currently Amended) A system as in claim [[2]] 4, wherein said supplemental signal is a hyperlink to a website, and said requested information displays said information from said hyperlink on a personal computer.

7. (Currently Amended) A system as in claim 2, wherein said command actuated by said television remote ~~that~~ accesses information and causes an email to be sent to said user.

Appl. No. : 09/669,959  
Filed : September 26, 2000

8. (Currently Amended) A system as in claim 2, wherein said ~~hyperlink~~ supplemental signal includes an indication of a referring source.

9. (Currently Amended) A system as in claim 2, wherein said command actuated by said television remote that accesses information and carries out actions that command comprises making a purchase of an item that is displayed on the television.

10. (Currently Amended) A system as in claim 2, wherein said remote includes a separate receiver which receives ~~hyperlinks~~ supplemental signals that are associated with a program that is currently being displayed on the television.

Claims 11-20 Cancelled

21. (Currently Amended) A method, comprising:  
using a remote control device for an entertainment media at a first time to produce a wireless signal that is used to control television-displayed programming content that is being delivered by said entertainment media,  
said remote mounted in a housing, which housing is totally separate from a housing of the entertainment media being controlled by the remote control device;  
and  
using said remote control device at a second time, to indicate that access is desired to information associated with a ~~hyperlink~~ supplemental signal that is

Appl. No. : 09/669,959  
Filed : September 26, 2000

associated with a television program which represents program content that is received over a program content receiving channel, that is being currently displayed carried on the entertainment media,

responsive to said remote control device being used to indicate that access is desired to contents associated with said supplemental signal, and wirelessly sending information indicative of the ~~hyperlink~~ supplemental signal to a separate computer, which separate computer has a separate display from said television.

22. (Currently Amended) A system as in claim 2, wherein said television program that is currently being displayed on the display of the television, and with which the supplemental signal ~~hyperlink~~ is associated, is a television program obtained from a television broadcast.

23. (Currently Amended) A method as in claim 21, wherein said television program associated with the ~~hyperlink~~ supplemental signal is a television program obtained from a television broadcast.

24. (New) A system as in claim 1, wherein said second communication part of said television remote operates to send said additional information to said second computer only if said additional information is selected during a time while it is being displayed, whereby indicating that said access is desired after said supplemental information is displayed does not cause said wirelessly sending.
